General Certificate of Education Advanced Level Examination January 2012

Mathematics

MFP4

Unit Further Pure 4

Friday 27 January 2012 9.00 am to 10.30 am

For this paper you must have:

• the blue AQA booklet of formulae and statistical tables. You may use a graphics calculator.

Time allowed

• 1 hour 30 minutes

Instructions

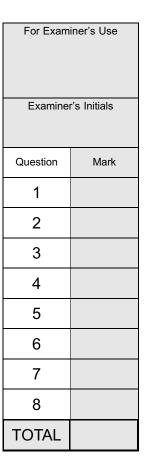

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer the questions in the spaces provided. Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

	Answer all questions in the spaces provided.
1	The vectors $\bf a$ and $\bf b$ are such that $\bf a \cdot \bf b = 21$, $ \bf a = 5\sqrt{2}$ and $ \bf b = 3$. Determine the exact value of $ \bf a \times \bf b $. (5 marks)

2	Describe the single transformation represented by each of the matrices:					
(a) $\begin{bmatrix} 0 & 0 & 1 \\ 0 & 1 & 0 \\ 1 & 0 & 0 \end{bmatrix}$; (2 marks)					
(b	$\begin{bmatrix} 0.6 & 0 & -0.8 \\ 0 & 1 & 0 \\ 0.8 & 0 & 0.6 \end{bmatrix}. \tag{3 marks}$

3 (a) Find the eigenvalues and corresponding eigenvectors of the matrix $\mathbf{M} = \begin{bmatrix} 4 & 5 \\ 5 & 4 \end{bmatrix}$.

(6 marks)

The plane transformation T is given by the matrix \mathbf{M} . Write down the coordinates of

the invariant point of T.

4	Let $\mathbf{X} = \begin{bmatrix} 3 & x \\ -1 & 7 \end{bmatrix}$.	
(a	Determine $\mathbf{X}\mathbf{X}^{\mathrm{T}}$.	(2 marks)
(b	Show that $Det(\mathbf{X}\mathbf{X}^T - \mathbf{X}^T\mathbf{X}) \leq 0$ for all real values of x.	(4 marks)
(c	Find the value of x for which the matrix $(\mathbf{X}\mathbf{X}^T - \mathbf{X}^T\mathbf{X})$ is singular.	(1 mark)

5 (a) Determine the two values of the integer n for which the system of equations

$$2x + ny + z = 5$$

$$3x - y + nz = 1$$

$$-x + 7y + z = n$$

does not have a unique solution.

(4 marks)

(b) For the positive value of n found in part (a), determine whether the system is consistent or inconsistent, and interpret this result geometrically. (6 marks)

6 The planes Π_1 and Π_2 have equations

$$\mathbf{r} \cdot \begin{bmatrix} 2 \\ 1 \\ 7 \end{bmatrix} = 10 \text{ and } \mathbf{r} \cdot \begin{bmatrix} 3 \\ 1 \\ -4 \end{bmatrix} = 7$$

respectively.

- (a) Determine, to the nearest degree, the acute angle between Π_1 and Π_2 . (4 marks)
- (b) By setting z=t, find cartesian equations for the line of intersection of Π_1 and Π_2 in the form

$$\frac{x-a}{l} = \frac{y-b}{m} = z = t \tag{6 marks}$$

(c) The line L, with equation $\mathbf{r} = \begin{bmatrix} 20 \\ -1 \\ 7 \end{bmatrix} + \lambda \begin{bmatrix} 1 \\ 9 \\ 4 \end{bmatrix}$, intersects Π_1 at the point P and Π_2 at the point Q.

Show that $PQ = k\sqrt{2}$, where k is an integer. (6 marks)

7 The plane transformation T is a rotation through θ radians anticlockwise about O, and maps points (x, y) onto image points (X, Y) such that

$$\begin{bmatrix} X \\ Y \end{bmatrix} = \begin{bmatrix} c & -s \\ s & c \end{bmatrix} \begin{bmatrix} x \\ y \end{bmatrix}$$

where $c = \cos \theta$ and $s = \sin \theta$.

(a) Write down the inverse of the matrix $\begin{bmatrix} c & -s \\ s & c \end{bmatrix}$ and hence show that

$$x = cX + sY$$
 and $y = -sX + cY$ (3 marks)

(b) The curve C has equation $x^2 - 6xy - 7y^2 = 8$.

The image of C under T is the curve C' with equation $pX^2 + qXY + rY^2 = 8$.

(i) Use the results of part (a) to show that

$$q = 6s^2 + 16sc - 6c^2$$

and express p and r similarly in terms of c and s.

(4 marks)

(ii) Given that θ is an acute angle, find the values of c and s for which q=0 and hence in this case express the equation of C' in the form

$$\frac{X^2}{a^2} - \frac{Y^2}{b^2} = 1$$
 (8 marks)

(iii) Hence explain why C is a hyperbola.

(1 mark)

8	For $n \neq 1$, the vectors a , b and c are such that
•	1 of h / 1, the vectors a, b and c are sach that

$$\mathbf{a} = \begin{bmatrix} 1 \\ n \\ n^2 \end{bmatrix}, \quad \mathbf{b} = \begin{bmatrix} 2n \\ 2n^2 + n \\ -1 \end{bmatrix} \text{ and } \mathbf{c} = \begin{bmatrix} n-1 \\ n^2 - 1 \\ 1 - n^2 \end{bmatrix}$$

Determine the value of n for which \mathbf{a} , \mathbf{b} and \mathbf{c} are linearly dependent. (9 marks)
